## INSTALLATION

**Field Cuttable** LUXFLEX is fully field cuttable and may be cut horizontally or vertically along the designated cutting lines. The smallest piece that may be cut measures 2" x 4" or 50.8mm x 101.6mm. LUXFLEX is fully adaptable for backlighting applications of many sizes and shapes.

**Environment** Indoor location safe only. For best performance, avoid mounting LUXFLEX LED sheets in direct sunlight, near direct water contact, or by surfaces subject to puddling caused by rainfall or sprinkler sprays.

**Customizable Wattage Available** Please reach out to our team for applications requiring specific wattage requests.

**Operating Temperature** -13°F ~ +140°F (-25°C ~ +60°C)

**Ambient Temperature** -13°F ~ +158°F (-25°C ~ +70°C)

**Mounting** May be mounted with 3M adhesives or with standard screws. All LUXFLEX sheets feature 3M adhesive on the reverse side of the sheet and 9 holes per sheet for mounting with screws.

**Heat Sink** Not required for installation. LUXFLEX illuminates spaces with reduced thermal consumption and output, which makes it perfect for placement behind a diffuser in a compact space.

**Tiling Multiple Sheets** Each LUXFLEX sheet is designed for tiling multiple full and partial sheets in a series and connecting them to one another. To tile LUXFLEX identify the female Molex® connector and match the polarity of the connecting wire according to the polarity indicated next to the connector. Red wire is positive. Black wire is negative. The front of the male Molex connector, indicated in the images below, must always be facing up when inserting the wire into the connector. LEDs will immediately light up if the wiring is correct.

**Curved Applications** LUXFLEX may be flexed for curved or radius applications to best fit your environment.

### WIRING THE MOLEX® CONNECTOR

Red wiring should always be aligned to the positive charge. Black wiring should always be aligned to the negative charge.

RED WIRE IS POSITIVE.  
BLACK WIRE IS NEGATIVE.

**To Avoid Hotspots, Plan Your Setoff (Airgap) Depth** To prevent hotspots, we recommend installing LUXFLEX with a setoff or airgap anywhere from 1-4" away from your diffuser or face material. This setoff or airgap depth will vary depending on the nature of your diffuser or illuminated surface. Review the table below for general guidelines to follow during installation.

OPACITY				
OPACITY PERCENTAGE	<12%	15% - 20%	20% - 35%	>35%
MINIMUM SET OFF DEPTH	4"	2.5"	1.5"	1"
