

DMX512 Terminator RJ45

OVERVIEW:

The DMX512 Terminator is used when multiple DMX fixtures are on a single DMX line (Universe). The DMX512 Terminator removes noise on the DMX transmission line which improves the reliability of your fixtures. When a DMX signal is transmitted to the end of the DMX line without being terminated, a reflected signal bounces back along the line and can cause problems with the DMX fixtures. The longer the DMX cable run, the greater the risk of the reflected signal.

- 120 Ohm DMX 512 Terminator with RJ45 connector.
- Use to avoid data signals being reflected from the end of the data cable.
- Molded housing with protected "click-lock-tab".
- Gold plated pins on connector.
- Sturdy shell style packaging.
- Easy to use.
